# Challenges and possibilities for the marine environment

What are your biggest concerns for the offshore environment with respect to the energy transition?

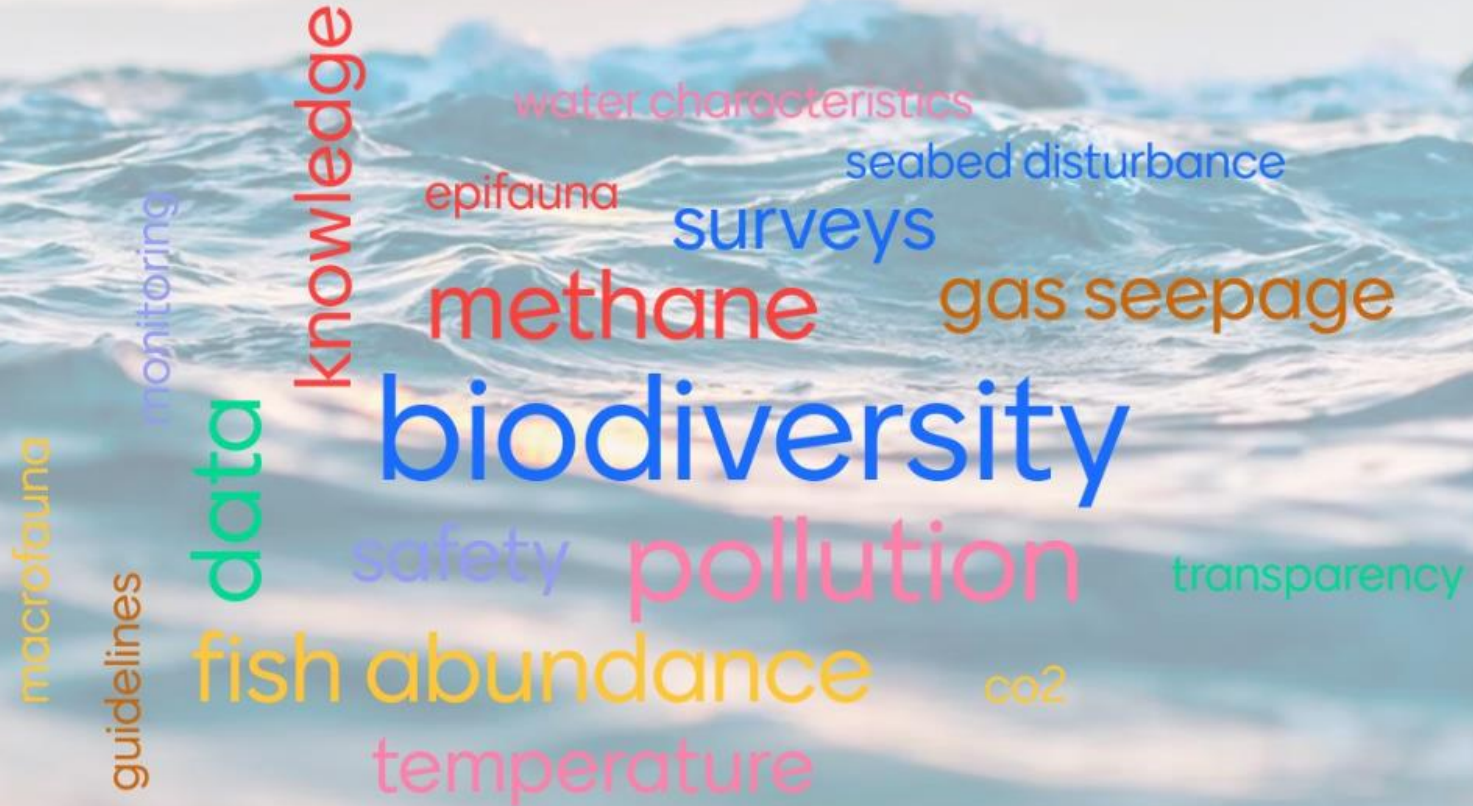

What do you see as the biggest opportunity with respect to the environment vs the offshore energy transition?

no turbines on land  
improved biodiversity  
transparency  
more data  
increased awareness  
improved marine life  
jobs  
more research  
reduced fishing  
collaboration  
better understanding  
more knowledge  
clean energy  
marine protection  
reduced global warming  
better data availability  
improved biodiversity

monitoring

What are the most important parameters when talking environmental baselines prior to offshore transition activities?

How can we ensure optimal use of the offshore space while ensuring lowest possible impact on environment?

mixed energy grid  
biodiversity aligning expectations  
integrated solutions find synergies  
collaboration optimisation  
reuse data sharing politics  
storage new technology  
reduce impact  
reuse platforms and wells  
impact assessment  
research  
planning  
regulations  
monitoring  
survey
